ARGYA SABIH ELYSIO

Full-Stack Web Developer & AI / Computer Vision Engineer | IT Student, Universitas Gadjah Mada

Yogyakarta, Indonesia | 081252101846 | argy.sabih@gmail.com

linkedin.com/in/argyasabih | github.com/ArgyaSabih | argyasabih-portfolio.vercel.app

PROFESSIONAL SUMMARY

Information Technology undergraduate at Universitas Gadjah Mada (expected 2027) with 3+ years of web development and hands-on computer vision and AI projects. Shipped 6 production websites with Next.js, including the official PIONIR 2025 orientation site (689,692 views, 10,000+ new students), and led the web team as Sub-Coordinator on 2 events. Built a real-time YOLO detection system (16.7 FPS on CPU, 0.89 mean confidence), a pose-based exercise form analyzer with 222 tests, and an Isolation Forest SIEM prototype. Interned at PT Telkom Indonesia, building a geospatial analytics dashboard in 1 week. Seeking a Web, Software Engineer, AI, Computer Vision or Data internship or entry-level role.

TECHNICAL SKILLS

Expert: HTML, CSS, JavaScript
Advanced: Python, React.js, Next.js, TailwindCSS, MongoDB, Git/GitHub
Web & backend: Node.js, Express.js, REST APIs, MySQL, PostgreSQL, Firebase, Prisma, Strapi, Sanity CMS, Auth.js, JWT, Google OAuth, GSAP, Docker, Figma
AI, vision & data: OpenCV, YOLO (YOLOv8-Pose, YOLO26n), ONNX, OpenVINO, scikit-learn, pandas, NumPy, Isolation Forest, FastAPI, exploratory data analysis, data cleaning
Tools & soft skills: Microsoft Word, Excel, PowerPoint; team leadership, communication, public speaking, time management

WORK EXPERIENCE

Intern, Digital Connectivity Service 01/2026 – 02/2026
PT Telkom Indonesia | Datacomm & NextGen Product, Jakarta | Two-intern team, 6 weeks

- Built the NCIX Reporting Dashboard in 1 week with Next.js 15, React Leaflet and TailwindCSS: an interactive map with 3 layers (heatmap, bubbles, ASN trace) and 3 analysis views over 1,622 membership records from 26 data-center locations, with CSV upload that cleans and normalizes data automatically.
- Wrote business and technical studies for 4 new B2B products (NeuCentrIX Interconnect L1 On Net, L1 Off Net, NeuCentrIX Lite, SDWAN IBL Huawei) using Business Model Canvas, PESTLE, Porter's Five Forces and STP analysis.
- Prepared the retirement hearing for VPN IP Netmonk: showed 0 lines in service and Rp0 revenue from 2023 to 2025, placed it in the Decline stage (Product Life Cycle) and the Dogs quadrant (BCG Matrix), and proposed a take-down roadmap targeting April 2026 with no customer migration needed.

Sub-Coordinator, Web Development – Porsenigama 2025 07/2025 – 11/2025
Forkom UGM | UGM's annual sports and arts week

- Led an 8-member web team (2 UI/UX, 4 front-end, 1 back-end, 1 sub-coordinator) through a 2.5-month build; the site reached 124,947 views.
- Delivered the MVP: a Porsenigama Leaderboard showing faculty scores (Strapi CMS, MySQL) and the interactive game "Gelora Juara", built with Next.js, TailwindCSS and GSAP.

Front-End Web Developer – PIONIR Gadjah Mada 2025 02/2025 – 08/2025
Direktorat Kemahasiswaan UGM | Official orientation program for new UGM students

- Built front-end features in a 7-member team (2 UI/UX, 4 front-end, 1 sub-coordinator) over 3 months; the pionir.ugm.ac.id site reached 689,692 views, serving 10,000+ new students.
- Delivered MVP pages with Next.js, TailwindCSS and GSAP: "Kaleidoskop" (search each new-student group with its documentation) and two interactive games, "Kelana Nusa Talenta" and "Kemabara Loka".

Sub-Coordinator, Back-End Web Development – Technocorner 2025 11/2024 – 06/2025
DTETI UGM | Annual technology event of the Department of Electrical and Information Engineering

- Led a 3-person back-end team as sub-coordinator, with a pull-request workflow, branch rules and commit conventions.
- Built the competition registration API (Node.js, Express, MongoDB): Google OAuth login, JWT authentication, team registration and verification, payment-proof upload to Google Drive, and Google Sheets sync for the committee.

Front-End Web Developer – Porsenigama 2024 09/2024 – 11/2024
Forkom UGM

- Built the event site with Next.js, TailwindCSS and GSAP animations; it reached 195,474 views.

Front-End Web Developer – Gelanggang Expo 2024 06/2024 – 08/2024
Forkom UGM | UGM's annual student activity expo

- Built the expo site (Next.js, TailwindCSS, Firebase) presenting 55 student units under 4 Sekber, with an event timeline, FAQ and a mini game that matches new students to units.

Back-End Web Developer – Technocorner 2024 11/2023 – 06/2024
Departemen Teknik Elektro dan Teknologi Informasi (DTETI) UGM

- Developed back-end features for the Technocorner 2024 event website as IT staff.

Staff, Public Relations – KMTETI 01/2024 – 01/2025
Humas KMTETI, DTETI UGM

- Contributed to 4 core work programs of the department student association, whose Instagram account has 5,606 followers.

PROJECTS

Desa Rajawali Official Website – KKN-PPM UGM, Banda Neira
desarajawali.id | Next.js 14, TailwindCSS, Auth.js, Sanity CMS, Neon PostgreSQL, Zod

- Built a village government platform: public site (news, gallery, village profile, demographics, contact) and an admin panel for aspiration follow-up, user roles and an activity log.
- Added a citizen aspiration form with tracking numbers, role-based access control, rate limiting and input validation; wrote a user guide so village staff manage content without code.

RTOD – Real-Time Object Detection System
github.com/ArgyaSabih/real-time-object-detection-system | OpenCV, YOLO26n, ONNX, OpenVINO

- Built a desktop app that runs YOLO on webcam video across 80 COCO classes, with bounding boxes, confidence scores, live threshold control and an FPS panel; models exported to ONNX and OpenVINO at 3 input sizes (320, 416, 640).
- Measured on CPU only (Ryzen 5 6600H): 16.7 FPS, 64.5 ms p95 inference latency (target 200 ms), 0.89 mean confidence and 329 MB memory. A 29.5-minute stability run processed 25,024 frames with 0 read failures and no memory leak.

NETRA – AI-Powered SIEM with Live Monitoring Dashboard
github.com/ArgyaSabih/NETRA | Next.js, Express, Prisma, FastAPI, scikit-learn, Docker

- Developed a 3-service system (Next.js dashboard, Express API, FastAPI AI service) in Docker Compose: users upload Zeek network logs, an Isolation Forest model labels records as potentially malicious or benign-like, and results appear on a live dashboard.

Exercise Form Analyzer
github.com/ArgyaSabih/exercise_form_analyzer | YOLOv8-Pose, OpenCV, NumPy

- Built a pose-based analyzer for squats and push-ups that measures knee, torso, elbow and body-line angles, counts reps, and reports which rep failed, why, and by how many degrees, then writes an annotated video; also runs on a live webcam.
- Designed ranked fault detection (for example hips up versus hips down) with per-rep JSON summaries for evaluation, backed by 222 automated tests.

Cerita Neira Website – KKN-PPM UGM
ceritaneira.com | *Next.js, TailwindCSS, GSAP*

- Developed the team website presenting digital innovation, village governance and conservation programs in Banda Neira.

EDUCATION

Universitas Gadjah Mada – S1 Information Technology 07/2023 – Present
Faculty of Engineering, DTETI | Expected graduation 2027

- Interested fields: Programming, Web Development, Computer Vision, Artificial Intelligence, Data Analytics. Relevant coursework: Computer Vision, Computer Security.

SMA Negeri 1 Semarang – Mathematics & Natural Sciences 07/2020 – 05/2023

CERTIFICATIONS & AWARDS

Silver Medal, IoT and Its Application – Indonesia International Applied Science Project 2022 12/2022
Indonesian Young Scientist Association

Exploratory Data Analysis in Python – DataCamp 09/2025 – Present

Cleaning Data in Python – DataCamp 09/2025 – Present

Belajar Dasar Pemrograman Web – DBS Foundation Coding Camp, Dicoding Academy 01/2024 – 02/2027
